

## FA-UK DATA SHEET

### **Why buy our worms**

It's not a well-known fact, that around 80% of the Dendrobaena's that we use in the UK for either fishing or pet treats actually come from The Netherlands.

When we found this out it was difficult to understand why and we were not happy and wanted to make a change, so we set about investigating the whole process and finally we were ready to start.

We have a **MICRO WORM FARM** and breed & sell **UK BRED & BORN** worms, our goal is to produce around 100kg a week. So what are the benefits of buying our worms?

### **Benefits**

- Keeps money in our local community, and promotes economic growth
- Money spent in the UK rather than importing goods aids in building a robust local economy
- Worms are **FRESH**, buying from a **UK MICRO FARM**. If imported they would be harvested and shipped and then handled in the UK by 3 main importers and sent out to a middle man who then sell to tackle shops. Our worms are picked and packed twice a week so at the most they are 3 days out of the farm and 1 day shipping. **YOU WILL NOT GET FRESHER**
- Environmental benefits of buying local include;
  - Reduced landfill waste
  - Worm castings that are produced in the breeding process is sold into agriculture
  - Reduction of our (UK) environmental footprint

So we hope that the next time that you purchase for fishing or for pet treats, that you find a local breeder and support a local business.
